PRISM 7.2 is the Future of Acquisition Innovation

Redefining the benchmarks of modern acquisition & contract lifecycle management

PRISM 7.2 takes a dramatic leap forward to deliver innovation inspired by the rapid changes in digital technology and the government community. Completely redesigned with an adaptive and dynamic user experience, PRISM 7.2 fully supports today's mobile and social workforce to encourage and optimize collaboration between program offices and the contracting community that supports them.

PRISM 7.2 supports users with a wide range of experience, perfectly adapted to today's changing workforce. With integrated guidance and field level help that can be customized by your organization, PRISM supports the just-in-time training needed to support a global workforce.

Limitless Configuration Options

PRISM 7.2 is COTS 2.0 – it's flexible and adaptable. There are literally thousands of ways to configure PRISM 7.2. As agency missions change, PRISM can be easily configured without additional programming. Additionally, because Compusearch manages all the regulatory changes (FARS/DFARS) that are associated with federal and DoD acquisition, agencies can spend more time focused on the important issues of supporting their missions. And, PRISM's extendable architecture provides agencies with confidence that it can adapt to support their future requirements.

SOA Compliant Modular Architecture

Built upon a modular and highly configurable SOA compliant architecture, PRISM can easily interface with other systems within your organizations stack such as financial and inventory management systems. Out of the box, PRISM is fully integrated with a wide range of government systems.

A Proven Low Risk Solution

PRISM is widely used within the Federal and DoD landscape by more than 100 organizations worldwide, including the vast majority of Cabinet-level agencies and offices, some of whom work in and support missions in some of the most austere environments around the globe. PRISM has proven time and again that it works equally well in an on premise, in the cloud, or in a shared services environment. It is this wide breadth of experience that has earned PRISM the reputation as a highly successful and low risk solution.

PRISM 7.2 is the result of a highly collaborative partnership between Compusearch and Federal and DoD agencies. It brings together the program office staff, contracting professionals, and financial managers into a single, linked community for greater efficiency and productivity and never before seen levels of transparency and visibility."

Reid Jackson, Compusearch CEO
