

# PRISM™

## Highlights

- Collaboration at all stages**  
*Online environment supports sharing of information between all stakeholders throughout the acquisition lifecycle.*
- Real-time visibility & transparency**  
*Delivers real-time visibility and transparency across the enterprise including comprehensive audit trails.*
- Business intelligence**  
*Integrated business intelligence and reporting dashboard delivers the insights needed to optimize operations.*
- Knowledge management**  
*Configurable guidance and online help systems provide the capability to share knowledge. Online search capability and access to similar projects provide models for future acquisitions or conveying lessons learned.*
- Open architecture**  
*Open, SOA compliant architecture designed for today's modern ERP approach. Integrates seamlessly into any ERP stack.*
- User-centric**  
*Logical and intuitive. Puts the tools and information at your fingertips. Streamlines processes increasing efficiency/productivity and reducing overall user adoption time. Offers guided and power-user experiences.*
- Architected to evolve**  
*Highly configurable, with the agility to rapidly adapt to changes in mission direction.*

## Comprehensive, full-lifecycle acquisition management built specifically for government

PRISM is a powerful, web-based application that provides federal and DoD agencies with the tools needed to effectively support the complete acquisition management lifecycle, from initial planning and requisitioning through source selection, award, post award management, and closeout.

PRISM is the most robust acquisition management system available. It was specifically designed for the unique complexity of government acquisition and it comes pre-loaded with all the tools needed to ensure regulatory compliance.

### The most successful acquisition management system for government

Over 100 defense, intel, and federal agencies around the globe, with more than 40,000 users, rely on PRISM every day. PRISM is used on six continents and has even been used in theater in the Middle East. It is the only acquisition management system with the functional depth and breadth required for their missions. PRISM is a proven solution and offers the lowest risk and highest return on investment of any system available for government.

### Supports your mission today and tomorrow

A key to PRISM's success is its modular approach that allows agencies to select and utilize the functionality that best supports their mission, and to define the internal business rules that will govern those processes. It is highly configurable and can support a wide range of acquisitions, from the most basic to the most complex major weapon systems. And, PRISM is the only solution with the agility to rapidly adapt to changes in mission direction.

### Setting new benchmarks for modern acquisition management

PRISM has evolved beyond process automation and data capture to become a powerful BI-centric solution, providing key insights for complex planning and enabling informed decision making. It offers a rich Web 2.0 interface that streamlines processes and organizes content and functions so that they are logical and intuitive. PRISM's user-centric approach increases productivity and efficiency and reduces user adoption time.

### Engineered for today's mobile workforce

PRISM provides the ability to support an increasingly mobile workforce, from telecommuters to natural disaster recovery teams, and war fighters. Users with persistent internet connectivity can access PRISM from anywhere in the world, in both full and low bandwidth environments, using just a web browser.

Now with PRISM Mobile, even users in regions with intermittent and no connectivity can continue acquisition operations without interruption. As soon as a connection can be made, all the data will be synced with the central PRISM database.

## Standard Features

- FAR compliant
- Hierarchical support for multi-organization structure
- Rule based user access
- Clause & document templates
- Workflow and approvals rules
- Workload management
- E-signature support
- Multi-currency support
- End-to-end paperless processing
- Ability to share data across documents - *eliminates duplicate data entry*
- Single sign-on PIV/CAC card enabled
- Out-of-the-box integration with IAE (SAM) systems
- SOA architecture supports seamless integration with ERP and other business systems (internal/cloud)
- Section 508 compliant

## Additional Features in DOD Version

- DFARS compliant
- Compliant with Business Enterprise Architecture (BEA)
- Authority to Operate through DIACAP
- Compliant with DPAP Procurement Data Standards
- Out-of-the-box integration with GEX, EDA, and, WAWF
- DoD CLIN/SLIN structure and numbering
- DFARS compliant document numbering
- Procurement Instrument ID numbers
- DFARS ACRN support
- Support for exhibits and CDRLS

## Streamlines the acquisition process

From initial request to closeout, PRISM guides users through the acquisition process including extra support for infrequent users. PRISM's built in productivity tools minimize data entry and maximize efficiency through electronic routing, workflow, and workload management. In addition, PRISM provides the ability to offer pre-defined document and clause templates that help to ensure the accuracy and completeness of acquisition records.

## Helps you manage more effectively

With built-in system switches, configurable business process rules, and more, PRISM offers complete control throughout the acquisition lifecycle. Detailed reporting, workload management, milestone tracking, and performance metrics make PRISM a powerful management tool.

PRISM also offers an integrated reporting dashboard that supports a wide range of report style widgets with drill-down and drill-through capability, as well as robust data visualization features that can be animated and interactive.

## Open architecture supports seamless integration

Built on an open standards, SOA architecture, PRISM can be easily slipped into any ERP stack; sending and receiving data from across the enterprise. It can support financial systems, data warehouses, document repositories and even external dashboards. It delivers real-time visibility and transparency including comprehensive audit trails of all activity across the acquisition life-cycle. PRISM also offers out-of-the-box integration with IAE (SAM) systems, EDA, GEX, and WAWF.

## Multiple implementation options

PRISM can be installed locally within your IT infrastructure or at a hosted facility of your choice. All PRISM modules are also available as part of our On Demand program where they are hosted by Compusearch as a cloud computing solution. With PRISM On Demand, you have the same comprehensive acquisition management capability available in a traditional implementation of PRISM. We've just eliminated the headache and expense of managing the IT infrastructure to support it. And our 99.9% uptime guarantee and 24/7 support mean you can rely on a steady stream of cloud computing power.

## Supports integration of suppliers into electronic process

FedConnect® is a secure web portal that links government acquisition professionals with their supplier communities to help increase competition, achieve performance objectives, and realize strategic sourcing.

FedConnect helps government agencies efficiently capture and manage both transactions and interactions with suppliers in a structured and secure environment. It is much more than just an advertising site for contracting opportunities. It is fully integrated with PRISM to provide secure, bi-directional communication between government and suppliers. With FedConnect, suppliers can submit bids and proposals that are transmitted directly into PRISM where they can be evaluated. Once the award determination is made, FedConnect can deliver the award and manage all post award communication and activity with the supplier.

FedConnect can be hosted by Compusearch and provided as a cloud computing solution or installed locally within a government organization.
